Clinical Research in Cardiology

Markers of T cell and monocyte/macrophage activation are associated with adverse outcome, but give limited prognostic value in anemic patients with heart failure - results from the RED-HF study

Aurelija Abraitte, Lars Gullestad, Pål Aukrust, L. Kou, J. Young, D. Van Veldhuisen, Thor Ueland

Supplementary Table 1. Characteristics of the enzyme immunoassays showing levels (as %) vs. comparison levels.

| | Non-fasting, % of fasting | Noon, % of morning | 4h bench, % of "fresh" | 24h bench, % of "fresh" | 4h fridge, % of "fresh" | 24h fridge, % of "fresh" | 3 freeze-thaw cycles, % of fresh |
|------------|---------------------------|--------------------|------------------------|-------------------------|-------------------------|--------------------------|----------------------------------|
| sCD163 | 97% | 120%* | 91% | 85% | 82% | 80%* | 99% |
| MIF | 98% | 102% | 103% | 113% | 99% | 90% | 105% |
| Granulysin | 95% | 123%* | 100% | 102% | 99% | 91% | 87% |
| sIL2R | 98% | 100% | 113* | 102% | 92% | 89% | 92% |
| ALCAM | 90% | 134%* | 92% | 83% | 84% | 82%* | 97% |

The effect of post-prandial and diurnal variation and time exposure were assessed in 6 healthy individuals while the effect of freeze thaw cycles was assessed in 4 healthy individuals. *p<0.05.

Supplementary Table 2. Characteristics of the patients (n=1582) at baseline according to tertiles of sCD163, MIF, Granulysin, sIL2R, and ALCAM in plasma.

| Characteristic | | Tertile 1 | Tertile 2 | Tertile 3 | P-value |
|---------------------------|-------------|-----------|-----------|-----------|---------|
| Tertile limits | sCD163** | <0.49 | 0.49-0.86 | >0.86 | |

Values are given as mean \pm SD for continuous variables and % of cases for categorical variables. ACE, angiotensin-converting enzyme; ALCAM, activated leukocyte cell adhesion molecule; ARB, angiotensin receptor blocker; BMI, body mass index; BP, blood pressure; eGFR, estimated glomerular filtration rate; hsCRP, high-sensitivity C-reactive protein; hsTnT, high-sensitive troponin T; LVEF, left ventricular ejection fraction; MIF, macrophage migration inhibitory factor; NT-proBNP, N-terminal pro-brain natriuretic peptide; NYHA, New York Heart Association; sCD163, soluble cluster of differentiation 163; sIL2R, soluble IL-2 receptor; WBC, white blood cell; WHF, worsening heart failure.

* ng/mL, ** μ g/mL.

Supplementary Table 3. Predictors of leukocyte activation markers

| Granulysin | DM | 0.95 (0.85,1.05) | 0.94 (0.84,1.05) | 1.00 (0.88,1.14) | 1.00 (0.87,1.15) |
| | Non-DM | 0.88 (0.80,0.97) | 0.87 (0.78,0.97) | 0.90 (0.81,1.00) | 0.87 (0.78,0.98) |
| MIF | DM | 1.02 (0.91,1.13) | 1.02 (0.91,1.14) | 1.03 (0.92,1.17) | 1.06 (0.93,1.20) |
| | Non-DM | 1.09 (0.98,1.21) | 1.05 (0.95,1.18) | 1.08 (0.96,1.21) | 1.05 (0.93,1.19) |

ALCAM, activated leukocyte cell adhesion molecule; MIF, macrophage migration inhibitory factor; sCD163, soluble cluster of differentiation 163; sIL2R, soluble IL-2 receptor.*p<0.05

Supplemental Figure 1. Marker levels (ng/mL) according to year of isolation and distribution within each year (blue) and according to time of day isolation was performed (red). *p<0.05 vs. 0600-0900.

Supplementary Figure 1. Restricted cubic spline analysis of baseline leukocyte markers showing tertile (T1, T2 and T3) limits.
