8 ABSTRACT
9

10
11
12 Based on a literature review, this paper shows that current
13 mediatization scholarship is characterized by what Pike (1967)
14 refers to as *etic* accounts. These accounts forward theoretical
15 categories on media-related social change to conclude that our
16 age is characterized by deepened and expanded media reliance.
17 However, such theoretical extrapolation takes place not from,
18 but at the expense of, people's lived experiences, that is,
19 *emic* accounts of mediatization in everyday life. This paper is
20 an attempt to insert the *etic/emic* distinction to
21 mediatization research in order to develop more reflexive and
22 composite accounts. Drawing on examples from a representative
23 survey and qualitative interviews conducted over twenty years,
24 the paper problematizes *etic-oriented* conceptions of
25 mediatization. *Emic* analyses expose how perceptions of media
26 reliance shift over time and thus underscore the need to
27 develop research strategies that simultaneously consider the
28 objective structures of the social (mediatized) world and
29 subjective meaning-making structures.

30 **Introduction**
31
32
33

34 One of the challenges of mediatization theory is to describe
35 and validate "media-related social change". While there is a
36 general consensus in the field that mediatization refers to a
37 long-term (meta-)process of change, whereby activities within
38 a growing number of social areas are adapted to and reliant on
39 various media technologies and institutions, there are
40 different ways of conceiving of this change. One important
41 difference concerns how to understand the notion of "long-
42 term"; whether to address mediatization as a modern phenomenon
43 arising with independent mass media institutions, or relate it
44 to a much longer history of technological progress (see
45 Lundby, 2014a). Another - and much less discussed - difference
46
47
48

51
52
53
54
55
56
57
58
59
60

1
2
3 concerns whether to assess mediatization based on
4
5 *theoretically driven analyses* of how media shape social life,
6
7 or through the *lived experience* of different people. This is
8
9 the distinction between *etic* and *emic* approaches to social
10
11 life (Pike, 1967). Even if we focus upon relatively recent and
12
13 empirically graspable alterations, for example related to
14
15 digitalization, this remains a crucial epistemological issue.
16
17
18
19

20
21 In brief, while *etic* analyses would start out from pre-
22
23 established categories and then assess their existence in the
24
25 social world, *emic* analyses would try to grasp mediatization
26
27 processes *from within*; that is, through people's own accounts
28
29 of media reliance and their potential fluctuation over time
30
31 and between contexts. *Etic* and *emic* approaches are not
32
33 mutually exclusive, however. When studying mediatization there
34
35 are good reasons to apply a multiplicity of tools and
36
37 perspectives to grasp its complex nature, and to be clear
38
39 about how social change is understood and empirically verified
40
41 (*Reference removed*). This includes reflecting upon the
42
43 epistemological nature of one's own research and how *etic* and
44
45 *emic* approaches to mediatization might inform one another.
46
47
48
49

50
51
52
53 Against this backdrop, we want to contribute to the
54
55 theorization of media-related social change pertaining to
56
57 *everyday life*. While this focus necessarily invokes a rather
58
59 short time-frame, *everyday life* is interesting to study
60

1
2
3 because this is where mediatization is "deeply experienced" -
4 where media are moulded into ordinary, largely taken for
5 granted phenomena - and where emic approaches are particularly
6 valid. We use the term *media reliance* to refer to the
7 condition that such moulding processes lead up to; that is,
8 when media are not only present but also made *meaningful* in
9 everyday life. It is our understanding that adjacent
10 vocabulary, such as "media dependency", is more negatively
11 biased and hence might make us blind to precisely the emic
12 dimensions of mediatization.
13
14
15
16
17
18
19
20
21
22
23
24

25
26
27
28 If conducted systematically and over time, emic-oriented
29 studies on everyday media reliance will generate thicker
30 descriptions of mediatization than hitherto seen. Even though
31 certain strands have actively promoted a social constructivist
32 understanding of mediatization (e.g., Couldry & Hepp, 2017,
33 Andersson 2017, Schröder 2017, Bolin 2016), we argue there is
34 a need for (1) more elaborated emic accounts of mediatization,
35 especially when it comes to everyday life, as well as (2) more
36 explicit procedures for integrating emic and etic approaches.
37
38 As such, we want to specify the general call for further
39 empirical anchoring of mediatization theory that has been
40 raised by several commentators before us (e.g., Jensen, 2013;
41 *Reference removed*). Emic approaches to mediatization can, we
42 argue, bring further epistemological openness and sensitivity
43 to the study of mediatization.

1
2
3
4
5 The paper starts out with an introduction to what the
6
7 etic/emic distinction means and how it is related to similar
8
9 epistemological terminologies, and a discussion on how
10
11 mediatization research might benefit from greater sensitivity
12
13 to this distinction. We then provide an overview of how this
14
15 issue has been handled in mediatization research, with a
16
17 particular focus on everyday life. Our overview includes three
18
19 relatively recent edited volumes, altogether 64 chapters, and
20
21 shows (a) that the question of etic vs. emic approaches to
22
23 social change has not been sufficiently addressed (neither in
24
25 these nor in any related terms) and (b) that there is a lack
26
27 of studies conducted from an emic point of view. In the
28
29 following parts, we explore the implications of emic
30
31 approaches. We first present findings from a representative
32
33 Swedish survey showing that a major portion of the population
34
35 think that media technologies are *not* playing a greater role
36
37 in their lives today than five years ago and will *not* become
38
39 more important in the forthcoming years. While these results
40
41 provoke the question of whether the social force of
42
43 mediatization is actually as strong as some strands of the
44
45 research literature seem to suggest, they also point to the
46
47 limitations of survey data when it comes to grasping
48
49 mediatization from within. Based on Pugh's (2013) view of the
50
51 manifold meaning(s) of interview data and examples from
52
53 qualitative interviews conducted over two decades, we then
54
55
56
57
58
59
60

1
2
3 discuss how emic approaches to mediatization, and qualitative
4 interviews in particular, may deepen our understanding of the
5 changing nature of media reliance in everyday life. This leads
6 to the final part, where we propose a new direction for
7 mediatization theory and research that is more sensitive to
8 the etic/emic distinction.

14
15

Emic vs. etic understandings of mediatization

16
17
18
19

20
21
22
23 Let us first make a statement concerning our view of
24 mediatization. In recent years, there have been vivid debates
25 around mediatization; what the concept means as well as its
26 usefulness for grasping media's role in society and culture
27 (see, e.g., Deacon & Stanyer, 2014, 2015; Hepp et al., 2015;
28 Corner, 2018). The aim of this paper is not to reiterate or to
29 intervene into these debates concerning the very relevance of
30 mediatization as a concept. Our point of departure is that
31 mediatization is relevant as a *descriptive framing*, or what
32 Jensen (2013; following Blumer, 1954) calls a *sensitizing*
33 *concept*, for addressing the many ways in which different
34 realms of activity, in organizations as well as everyday life,
35 get dependent on, and adjust to, media. Mediatization is thus
36 not an explanatory concept, but refers to a "complex meta-
37 process" of social change whose composition entails a variety
38 of sub-processes that are differently attuned in different
39 social settings and different media environments (Krotz,
40
41
42
43
44
45
46
47

52
53
54
55
56
57
58
59
60

1
2
3 2014). The sub-processes can include anything from the
4
5 adaptation of people's love life in relation to the
6
7 proliferation of dating apps to the growing propensity among
8
9 politicians to use Twitter for coping with the logics of news
10
11 media. What unites all such situated sub-processes is that
12
13 they point to the growing reliance on mediated forms of
14
15 communication, including the technologies, texts and
16
17 institutional logics and/or social rituals through which
18
19 mediated communication occurs. Accordingly, we may think of
20
21 mediatization processes in both "vertical" and "horizontal"
22
23 terms. They include the *deepening* integration of media as
24
25 indispensable elements of, say, love and dating practices
26
27 ("vertical mediatization"), as well as the *expansion* of such
28
29 forms of dependence to more social groups and other realms of
30
31 activity ("horizontal mediatization").
32
33
34
35
36
37
38

39 We believe that this relatively open characterization of
40
41 mediatization - in itself an etic (albeit sensitizing)
42
43 conceptualization - is one that most mediatization researchers
44
45 can subscribe to. In spite of the rich body of literature on
46
47 mediatization, however, there is surprisingly little debate
48
49 concerning how to empirically anchor statements concerning
50
51 *growing* (deepening and/or expanding) media reliance in
52
53 everyday life. This is a complicated question regardless of
54
55 whether we are interested in mediatization's *longue durée* or
56
57 just its latest waves of digitalization and datafication (see
58
59
60

1
2
3 Couldry & Hepp, 2017). While critical commentators (e.g.,
4
5 Deacon & Stanyer, 2014, 2015; Corner, 2018) have pointed to
6
7 the tendency in some mediatization research to speak about
8
9 historical change without providing definitions of change or
10
11 systematic evidence of how change comes about, there are few
12
13 systematic attempts to assess how different types of evidence
14
15 can move mediatization theory and research forward in this
16
17 regard. One of the most important contributions comes from
18
19 Jensen (2013) who pleads for mediatization as a sensitizing
20
21 (as opposed to definitive) concept that needs further
22
23 grounding in various real-life settings to gain validity. As
24
25 given by Blumer's (1954, p. 7-8) original reasoning:
26
27
28
29
30
31
32

33 Whereas definitive concepts provide prescriptions of what to see, sensitizing concepts
34
35 merely suggest directions along which to look [...] In other words, what is common (i.e.
36
37 what the concept refers to) is expressed in a distinctive manner in each empirical
38
39 instance and can be got at only by accepting and working through the distinctive
40
41 expression.
42
43
44
45

46 While we subscribe to Jensen's epistemological point, there is
47
48 also a more specific question that deserves more attention in
49
50 mediatization research. It concerns the significance of
51
52 people's actual experiences of (potentially growing) media
53
54 reliance in theoretically derived claims about growing media
55
56 reliance.
57
58
59
60

1
2
3 This epistemological dimension corresponds to the distinction
4 between *etic* and *emic* approaches in social research. This
5 distinction was first coined by the behavioral psychologist K.
6 L. Pike (1967) and has since then been used mainly in subject
7 areas like anthropology (e.g., Kottak, 2006) and comparative
8 psychology (e.g., Berry, 1969, 1999). As given by Pike's
9 original formulation, *etic* and *emic* approaches provide
10 different starting-points for studying human behavior, but
11 should not be seen as mutually exclusive:
12
13
14
15
16
17
18
19
20
21
22
23
24
25

26 It proves convenient - though partially arbitrary - to
27 describe behavior from two different standpoints, which
28 lead to results which shade into one another. The *etic*
29 viewpoint studies behavior as from outside of a particular
30 system, and as an essential initial approach to an alien
31 system. The *emic* viewpoint results from studying behavior
32 as from inside the system. (Pike, 1967, p. 37)
33
34
35
36
37
38
39
40
41
42
43

44 While the differences between *etics* and *emics* have sometimes
45 led to problematic divides, meaning for instance that findings
46 may seem contradictory or incompatible (see, e.g., Helfrich,
47 1999), Pike (1967) saw the two approaches as complementary,
48 reminiscent of a stereographic picture (p. 41). While both
49 approaches have their advantages and shortcomings, they also
50 intersect. The *etic* approach is basically inescapable since
51 every researcher must start out with some pre-assumption about
52
53
54
55
56
57
58
59
60

Mediatization from within 11

1
2
3 the conditions he/she wants to study - like we just did when
4 we defined the basic tenets of mediatization. Another strength
5 of the etic perspective is the ability to compare different
6 empirical sources in order to generate more general
7 theorizations. Emics, by contrast, are good for gaining a
8 deeper sense of how socio-cultural conditions are constructed
9 and why people do what they do and think what they think. In
10 order to reach such knowledge, the researcher (typically a
11 cultural anthropologist, or, ethnographer) must engage with
12 the actual events of a lived situation and try to understand
13 it from the viewpoint of "insiders" (using interviews and
14 other valid data). An emic account should thus, as closely as
15 possible, resemble the view of the actor(s) located within the
16 particular culture or system under study (see, e.g., Kottak,
17 2006).

18
19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39 According to Pike, the richest understanding of a given social
40 phenomenon is achieved if the researcher manages to integrate
41 the experiences and interpretive frameworks of locally
42 situated individuals and groups with theoretical models that
43 are not affected by the social relations and interests of the
44 communities under study. Other researchers have suggested
45 similar strategies. Berry (1969, 1999), for example, advanced
46 a three-step strategy "to understand human behavior in its
47 cultural context" (1999, p. 165), including, first, a testing
48 of established theories in a new setting (imposed etic);
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 second, an exploration of "new aspects of the phenomenon being
4 studied in local cultural terms" (ibid.) (emics), and third,
5 an integration of the two approaches in order to generate more
6 complex theories with broader validity (derived etic).
7
8
9

10
11
12
13
14 There are also obvious similarities between Pike's view and
15 some well-known sociological epistemologies. Above all, the
16 fusion of etic and emic perspectives resembles Bourdieu's
17 reflexive sociology (which is not surprising given the
18 anthropological inclination of his work). This is evident in
19 Bourdieu's aim to overcome the gap between "social
20 phenomenology" (subjectivism) and "social physics"
21 (objectivism) in order to grasp the social (re)production of
22 power relations (Bourdieu & Wacquant, 1992, pp. 7-11) and in
23 his relational rather than substantialist approach to social
24 class. We will return to this in the final part of the paper.

30
31
32
33
34
35
36
37
38
39
40

41 Another view that speaks to the etic/emic distinction is
42 grounded theory, originally introduced by Glaser and Strauss
43 (1967). The underlying rationale of grounded theory is that
44 strong social theories can evolve only through an interplay
45 between rigorous inductive research (qualitative or
46 quantitative) and the systematic development of concepts.
47
48 While there are different directions of grounded theory (see,
49 e.g., Charmaz et al., 2018) a common denominator is that
50 research starts out from relatively open-ended sensitizing
51
52
53
54
55
56
57
58
59
60

Mediatization from within 1

1
2
3 concepts (see Blumer, 1954; Glaser, 1978) whose broader
4 validity and more specific properties are gradually refined
5 through comparison with empirical data. The research process
6 of grounded theory thus reminds us of Berry's (1999) notion of
7 "derived etic". Still, the relation between etics and emics is
8 not exactly the same as the relation between deduction and
9 induction. Whereas emics, just like inductive research, refer
10 to relatively open-ended empirical exploration, emics are also
11 - and more importantly in our context - about gaining an
12 *inside view of specific social conditions*, that is, a kind of
13 phenomenological understanding. The emic researcher tries to
14 get at the *point of view* of the human subjects whose
15 lifeworlds he or she sets out to study. By contrast, inductive
16 research, and thus grounded theory, may encompass almost any
17 kind of empirical data; "whatever comes the researcher's way
18 while studying a substantive area" (Glaser quoted in Palmer,
19 2019, p. 98).

37
38
39
40
41
42
43
44 To some extent, the etic/emic distinction also resembles the
45 distinction between nomothetic and idiographic knowledge
46 (Helfrich, 1999, p. 132). However, the etic/emic distinction
47 does more than distinguish the particular situation
48 (idiographic) from general patterns or causal laws
49 (nomothetic); it is a way of articulating how the sense-making
50 of situated subjects (emics) is related to the categorizations
51 imposed by the scientist (etics). It is in this latter

1
2
3 respect, we argue, that the etic/emic distinction - or similar
4 understandings as derived from especially Bourdieusian
5 sociology - can inform mediatization research. Especially,
6 general assertions of, for example, "deep mediatization"
7 (Couldry & Hepp, 2017, pp. 53-56) - a paramount example of a
8 sensitizing concept pertaining to ongoing changes - should be
9 further substantiated through emic analyses of how people in
10 specific locations, life trajectories, and so forth,
11 experience and think about media's impact in their lives now,
12 then and in the future.

An overview of etics and emics in the mediatization literature

30
31
32
33
34
35 There are numerous publications that in different ways try to
36 overview the field of mediatization research and identify
37 different thematic and epistemological orientations and how
38 they map onto other research traditions (see, e.g., Couldry &
39 Hepp, 2013; Lundby, 2014a; Adolf, 2017; Averbek-Lietz, 2017;
40 Scolari & Rodriguez-Amat, 2018; Nowak-Teter, 2019). In this
41 section, we present an overview of altogether 64 book chapters
42 published in three relatively recent volumes on mediatization:
43
44 (1) *Mediatization of Communication* (Lundby, 2014b), (2)
45
46 *Mediatized Worlds* (Hepp & Krotz, 2014), and (3) *Dynamics of*
47
48 *Mediatization* (Driessens et al., 2017). These volumes were
49
50 selected to give a broad overview of how the researchers most
51

57
58
59
60

Mediatization from within 1.

1
2
3 invested in the subject construct their claims around media-
4 related social change, especially related to everyday life. We
5 decided not to include books that deal specifically with
6 fields beyond everyday life, e.g., politics (Esser &
7 Strömbäck, 2014), or books that treat mediatization in a
8 secondary manner, e.g., in relation to "globalized and
9 mediatized eating cultures" (Dürschmidt & Kautt, 2019). While
10 our overview does not include journal articles, we believe
11 that the picture that emerges from our assessment of these
12 collections - which were edited to stake out the terrains of
13 mediatization research and include the most significant voices
14 in the field - suffices to actualize an important
15 epistemological discussion.

34

35 Lundby's (2014b) *Mediatization of Communication* is part of De
36 Gruyter's series of Handbooks of Communication Science. It
37 contains 31 chapters among which one is an introduction to the
38 field authored by Lundby (2014a) and one is a "critical
39 afterthought" written by Livingstone and Lunt (2014). While
40 this book represents the "handbook genre", and thus intends to
41 outline different thematic and theoretical subfields rather
42 than to present empirical cases, most of its chapters also
43 leave aside epistemological issues concerning how to study
44 mediatization. Notably, few authors reflect on whether their
45 arguments are grounded in inside accounts or
46
47

4 related social change.
5
6
7
8
9

10 The chapters are, according to our reading, biased toward etic
11 approaches. Typical examples include Sumiala's (2014)
12 application of Schulz's (2004) four mediatization sub-
13 processes in the context of public death; Schäfer's (2014)
14 combination of the same four processes with Krotz's (2007)
15 three types of mediatization in order to systematize the
16 mediatization of science, and Lövheim's (2014) integration of
17 different theoretical approaches, following above all
18 Hjarvard's (2013) institutional perspective, to chart the
19 mediatization of religion. The chapters that come closest to
20 the emic view are Hartmann's (2014) study of the mediatization
21 of homing and homelessness that implicitly advances an emic
22 approach through the concept of ontological security and
23 interviews with homeless people; Jansson's (2014) chapter on
24 how media technologies become indispensable in everyday life,
25 which applies qualitative interview data to show how media
26 reliance is experienced, and Madianou's (2014) work on
27 mediatization processes as experienced by Filipino migrants.
28 These chapters provide inside views to highlight ongoing
29 social transformations but do not discuss how this type of
30 evidence may be linked to theoretical models of long-term
31 change. A more extended historical perspective, but without
32 ethnographic sources, is found in Fornäs' (2014) chapter on

Mediatization from within 1

1
2
3 the mediatization of popular culture, which problematizes
4 whether the stage of digital mediatization is actually to be
5 conceived of as an intensification of mediatization compared
6 to earlier stages (graphic, print and audiovisual
7 mediatization).

8
9
10
11
12
13
14
15
16 The book also contains two chapters that resonate with emic
17 approaches but without dealing with everyday life; Strömbäck
18 and Esser's (2014) overview of the mediatization of politics,
19 which includes empirical evidence of how elite-decision-makers
20 perceive of the influence of media, and Bogoch and Peleg's
21 (2014) chapter that deploys interview statements from Israeli
22 judges to highlight the mediatization of the legal system. In
23 several other cases, authors discuss media-related changes
24 that directly pertain to the experiential realm without
25 presenting any actual inside view. This goes for, among
26 others, Auslander (2014) who discusses mediatization in terms
27 of "multiselfing" (p. 512) through an analysis of Lady Gaga's
28 music videos; Ess (2014) who analyses the mediatization of
29 selfhood from a philosophical perspective; Hoskins (2014) who
30 discusses the mediatization of social memory through a media
31 ecological approach, and Knorr Cetina (2014) whose chapter
32 outlines the mediatization of human interaction through a
33 theoretical account of the so-called synthetic situation. In
34 his overview of the field, Lundby (2014a) highlights
35 theoretical, epistemological as well as methodological aspects

1
2
3 of mediatization research, including, for example, the above-
4 mentioned distinction between sensitizing and definitive
5 conceptualizations. However, neither he nor Livingstone and
6 Lunt (2014) in their mapping of future research challenges
7 addresses the question of emic vs. etic approaches (or,
8 similar epistemological accounts).

17
18
19 The second book, *Mediatized Worlds*, is edited by Hepp and
20 Krotz (2014a) and contains 18 chapters including an
21 introduction by the editors and a concluding afterthought by
22 Schofield Clark (2014). The volume, according to the editors,
23 introduces a notion of "mediatized worlds" based on social
24 phenomenology and symbolic interactionism, and intends to
25 "ground mediatization research better in an everyday
26 perspective" (Hepp & Krotz, 2014b, p. 9). The editors also
27 state that the study of mediatized worlds means "researching
28 empirically in what way their communicative construction is
29 shaped by various media" (p. 8). These statements seem to call
30 for an emic approach. There is, however, no mentioning of
31 whether the everyday perspective on mediatized worlds should
32 also include an engagement with how people experience or
33 perceive of (potentially growing) media reliance. As Schofield
34 Clark (2014, p. 310) observes in her concluding chapter, most
35 of the contributors to this volume embrace an inductive
36 approach, which means that they try to explore new theoretical
37 avenues for mediatization research and open up new vistas for

2
3 future explorations of mediatization. Yet, this inductive
4
5 orientation, which also rests on a sensitizing
6
7 conceptualization of mediatization, does not converge with an
8
9 emic approach. There are in this volume just a few examples of
10
11 inside views.
12
13
14

15
16 The clearest example of an emic approach is provided by Storey
17
18 and McDonald (2014) in their study of the mediatization of
19
20 romantic love relations. The chapter includes numerous
21
22 examples and accounts (in the form of interview extracts) of
23
24 how ordinary people sense that networked media have changed
25
26 their love life. The authors also start out from a relatively
27
28 open-ended conceptual agenda. Another example is Peil and
29
30 Röser's (2014) study on the mediatized home, which applied
31
32 "ethnographic household portraits" (p. 239) to analyze the
33
34 domestication of media. This approach included a panel study
35
36 conducted with 25 German couples in 2008-2011, which made it
37
38 possible to observe certain short-term changes in the
39
40 mediatization/domestication balance. At the same time, the
41
42 chapter is governed by theoretical presumptions (e.g.,
43
44 concerning domestication) that align with etically oriented
45
46 research. The same goes for Hepp, Berg and Roitsch's (2014)
47
48 chapter, which develops the theoretical notion of "mediatized
49
50 subjective horizons of communitization" based on a rich
51
52 variety of qualitative data (interviews, diaries as well as
53
54 drawings), and Christensen's (2014) work on mediatization and
55
56
57
58
59
60

1
2
3 cosmopolitanism, which applies a combination of Bourdieusian
4 field theory and social phenomenology to explore people's
5 engagement with new media technologies. The analytical
6 procedures of these chapters can be described as an etic-emic-
7 etic sequence (cf. Berry, 1999). With these exceptions, the
8 book deals with mediatization processes largely through
9 theoretical considerations that only partially "hit the
10 ground" (cf. Couldry, 2014), and where people's experiences of
11 media reliance are rarely addressed.

24
25
26 The last book in our overview, *Dynamics of Mediatization*
27 (Driessens et al., 2017), contains 15 chapters including an
28 introduction by Driessens and Hjarvard (2017) and a conclusion
29 "charting the road ahead" by Bolin and Hepp (2017). The book
30 is sprung out of the ECREA temporary working group
31 "Mediatization", which became a permanent section of ECREA in
32 2016. In this book, about half of the contributions can be
33 described as theoretical investigations into the dynamics of
34 mediatization, for instance, concerning the historical
35 relations between "musicalization" and mediatization (Pontara
36 & Volgsten, 2017); the expansion of media museums as a sign of
37 converging processes of mediatization and "musealization", and
38 the theoretical dimensions of the mediatization field as such
39 (Adolf, 2017). A few of the theoretical chapters also reflect
40 on the lingering challenge to specify the nature of media-
41 related change, for example when it comes to the mediatization

3 of the automobile (Miller, 2017), and the need to account for
4 social agency as an integral part of mediatization processes,
5 for instance in terms of structuration (Perusko, 2017) or
6 "audiencization" (Schrøder, 2017).
7
8
9

10
11
12
13
14 Three chapters can be described as emically oriented. One of
15 them is Andersson's (2017) outline of a bottom-up approach to
16 mediatization starting out from the textures of everyday life.
17 The other two chapters are grounded in empirical work
18 conducted in political settings rather than everyday life;
19 Orchard (2017) presents a study of the relations between
20 journalists, politicians and press officers in Chilean
21 politics based on interviews about perceived power-relations,
22 and Garland (2017) deploys interviews with former civil
23 servants and journalists in the UK to discern how relations of
24 dependency have altered since the 1990s and onwards. Garland's
25 chapter is the only one in the book that shows how emic data,
26 that is, empirical accounts from inside a social system (Pike,
27 1967), can be used to illuminate processes of media-related
28 social change. Interestingly, it is written from a perspective
29 that is more institutionalist than social constructivist and
30 deals with the transformations of politics and journalism
31 rather than everyday life.

54
55
56
57 In conclusion, our review of key volumes on mediatization
58 shows two important things. First, there are few accounts of
59
60

1
2
3 how inside experiences of media-related social change are to
4
5 be joined with theoretical models and conceptualizations of
6
7 mediatization. Second, only a minor share of the 64 chapters
8
9 apply inside empirical data and/or emic approaches to support
10
11 arguments concerning the mediatization of everyday life. This
12
13 is not to dismiss any of the above-mentioned contributions to
14
15 our field. But we see a risk that the overall lack of emic
16
17 accounts will foster an inclination in mediatization research
18
19 to emphasize change (as suggested by the very concept) without
20
21 making justice to the various, complex ways in which life
22
23 changes with media (to the extent it does) and how people
24
25 actually feel about it. Building on these earlier works, we
26
27 want to contribute to the epistemological discussions on
28
29 mediatization by presenting and discussing two methodological
30
31 approaches that in different ways try to grasp mediatization
32
33 from within: a survey study and ethnographic interviews.
34
35
36
37
38
39
40

A discrepant view of mediatization

41
42
43
44
45
46 We will now turn to survey data in order to problematize the
47
48 view provided in most of the mediatization literature. In an
49
50 on-going project called *[Title removed]*, we developed
51
52 different ways of using surveys to measure everyday media
53
54 reliance in Sweden. In a postal survey conducted by the SOM
55
56 Institute (Society Opinion Media) at Gothenburg University in
57
58 fall 2016 and an online survey conducted by Kantar Sifo in
59
60

Mediatization from within 2

1
2
3 spring 2019 we asked the following three questions (amongst
4 many others):
5
6
7
8
9

10 *(1) There are many media in our everyday lives, such as,*
11 *newspapers, radio, television, computers and mobiles. On the*
12 *whole, how important do you think media are in your life*
13 *today?*
14
15
16
17

18 *(2) In your experience, were media more or less important in*
19 *your life five years ago?*
20
21
22

23 *(3) Do you think media will be more or less important in your*
24 *life in five years?*
25
26
27
28
29

30 These questions were formulated not in order to provide any
31 precise "truth" or measure as to whether people are "in fact"
32 getting more or less reliant on different media, but to get a
33 tentative idea of whether people *think* that their lives are
34 getting more or less reliant on media (implicitly taken as
35 ensembles of different technologies) over time. While this is
36 not a situated investigation of how people in different
37 settings feel about media in their lives, which would call for
38 other methods than survey research, our approach can still be
39 understood as emic in that we asked people about their own
40 perception of change. Also, the survey method has the
41 advantage of enabling insights into how experiences of
42 mediatization are socially structured (according to class,
43 age, gender, geographical location, etc.).
44
45
46
47
48
49
50
51
52
53
54
55
56
57
58
59
60

> > INSERT TABLE 1 HERE <<

Regardless of the different sampling and data gathering techniques applied in the two surveys they resulted in similar patterns. When it comes to the *present* condition, a majority (more than 50 percent) of the respondents in both surveys found media to be very important in their lives (values 6 or 7 on a scale from 1 to 7). In the SOM survey, however, there was a larger share, 35 percent, stating the highest level of importance (7) than in the other survey (see Table 1). When it comes to experiences of *change*, there are indeed more people thinking that media will be more important in their lives in the forthcoming five years (16 percent in both surveys) than people stating the opposite, that media will be less important (8 and 14 percent in the two surveys, respectively). There are also more people thinking that media are more important today than five years ago (28/32 percent) than the opposite (9/12 percent). There is thus little support in this material for advocating the "end of mediatization", or to profess that people's felt media reliance in everyday life would decrease. Still, it is worth considering what it means that the *most common thing to state*, as shown in Table 1, is the experience of everyday media reliance remaining stable. A majority of our respondents (61/54 percent) state that media were as important five years ago as they are today. An even greater majority

Mediatization from within 2

1
2
3 (74/67 percent) of the Swedish population think that media
4
5 will be as important in five years as they are today.
6
7

8
9
10 There are of course demographic and other social factors
11
12 playing into the statistical pattern. If we look at the
13
14 overall experience of media reliance, older people find media
15
16 to be more essential in their lives than younger people.
17
18 Experiences of *growing* media reliance, by contrast, are more
19
20 common among younger people, and among those who have access
21
22 to a greater number of digital media devices and platforms.
23
24 Men are somewhat more inclined than women to state that media
25
26 are becoming more important in their lives. There are also
27
28 statistically significant correlations between experiences of
29
30 growing media reliance and media-related lifestyle practices,
31
32 such as, online shopping, social media use and film watching.
33
34
35
36
37
38

39 There are good reasons to follow up these findings in
40
41 longitudinal studies to discern whether the experience of
42
43 mediatization is foremost a "youth phenomenon", a transitory
44
45 state of mind tied to identity formation, or if a different
46
47 demographic pattern might evolve in the future. Our intention
48
49 here, however, is not to delve deeper into the underlying
50
51 statistics of felt media reliance in different groups. The
52
53 question we should ask is of a more epistemological nature. It
54
55 concerns the somewhat ambiguous relation between our findings
56
57 and mediatization theory. Why is it that most people do not
58
59
60

1
2
3 experience that media are becoming increasingly important in
4
5 their lives? And if experiences of growing media reliance are
6
7 mostly to be found among "media-savvy" youngsters - which
8
9 seems logical also given arguments around datafication and
10
11 deep mediatization - how come that older people to a greater
12
13 extent state that media are very important in their lives? We
14
15 argue that there is a need for more in-depth emic approaches
16
17 in mediatization research to get at these questions, in
18
19 combination with longitudinal research that can capture the
20
21 changes in how people experience and relate to media in
22
23 everyday life. In the following section, we demonstrate the
24
25 value of emic approaches in mediatization research by
26
27 considering a specific methodological framework for
28
29 interpretative analysis - the one proposed by sociologist
30
31 Allison J. Pugh (2013).
32
33
34
35
36
37
38

39 **The qualitative interview as an emic approach to media-related** 40 41 **social change** 42 43

44
45 The research interview has been criticized for merely
46
47 reflecting what people want to reveal about themselves instead
48
49 of capturing people's motivations (see, e.g., Sølvsberg &
50
51 Jarness, 2019). In defence of in-depth interviewing, Pugh
52
53 (2013) provides a sober examination of what interviews can and
54
55 cannot tell us about culture. In resonance with Pugh's call
56
57 for more reflexive interpretative analyses, we also argue for
58
59
60

1
2
3 the importance of not taking emic statements about media-
4 related change at face value and for the necessity of
5 considering the specific contexts in which statements are
6 made. In order to argue for the benefits of emic approaches to
7 mediatization, it is particularly worth attending to the four
8 kinds of interview-derived information that Pugh identifies:
9 *the schematic, the visceral, meta-feelings and the honourable*
10 *dimension.*

21
22
23 In order to flesh out our argument and illustrate Pugh's
24 framework, we will bring in excerpts from qualitative
25 individual and group interviews that were conducted by two of
26 the authors of this article. The interviews were performed in
27 Sweden during a period of 20 years (1996-2015), within the
28 scope of two interrelated projects: [Title removed] and
29 follow-up project [Title removed]. The majority of the
30 interviews, around 60, took place between 1996 and 2004,
31 whereas another 35 interviews were conducted in 2015. Thus,
32 all in all, about 100 interviews were carried out. Both sets
33 of interviews aimed to scrutinize the role of media in
34 everyday life. Due to lack of space, this article presents
35 excerpts from these interviews without much reference to their
36 broader context. However, we believe that the generated data -
37 spanning as they do over two decades - are useful for
38 illustrating how one can make sense of emic statements
39 concerning media-related social change. As a "side-effect",
40
41
42
43
44
45
46
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 the illustrating data also hint at what further emic-oriented
4 and longitudinal research could tell us about media-related
5 change, including variations in how users experience the role
6 of the media in everyday life. We will particularly highlight
7 what the multi-layered meanings of qualitative interviews may
8 add to an emic understanding of mediatization.
9
10
11
12
13
14
15
16
17
18

19 Pugh's *schematic* dimension acknowledges the well-known but
20 important fact that interview data reveal more than the spoken
21 word. Respondents' use of language as well as non-verbal cues
22 reflects the frameworks through which they understand the
23 world. We must therefore analyse *how* people answer questions -
24 not only *what* they say. It includes how language is
25 constructed, and what this tells us about people's experiences
26 of their own media use. This can be exemplified by an
27 interview from 1997, in which a woman in her 40s articulates
28 how she reads and relates to the local newspaper (compared to
29 the national one):
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45

46 I: What do you read in [the local daily paper]?

47
48 R: Quite the same [as in the national newspaper], but as it
49 is local it is different things that catches your
50 attention. It can be things that have curiosity value or
51 proximity value. Not so much advertisements. My husband is
52 better at that.
53
54
55
56
57
58
59
60

Mediatization from within 2

1
2
3 This woman says she reads the local newspaper in the same way
4 as she reads the national one. But by "inventing" concepts
5 such as "proximity value" and "curiosity value" she also
6 reveals that she considers local news less important than
7 national or international news, and that such news need to add
8 other values besides the sheer information they provide. She
9 hence must legitimize - for the interviewer and potentially
10 also for herself - why she still spends time reading it. This
11 formulation reveals how people sometimes underplay the role of
12 (certain types of) media in their lives, which also gives a
13 clue as to why our survey data showed relatively "moderate"
14 signs of growing media reliance.

15
16
17
18
19
20
21
22
23
24
25
26
27
28
29
30
31
32 The *visceral* kind of information in interviews inhabits "an
33 emotional landscape of desire, morality and expectations",
34 which is communicated through non-verbal cues, such as sighs,
35 facial expressions, laughter or pauses, as well as through
36 unresolved contradictions, silences, unfinished sentences and
37 similar expressions (Pugh, 2013, p. 50). This dimension is
38 evident in one of the interviews from 1990s where Jeanette, a
39 25-year-old woman tries to explain why she reads so many
40 fantasy books:

41
42
43
44
45
46
47
48
49
50
51
52
53
54
55 R: I read almost all the time. I read just before you came
56 (laughs). So, it's like...as much, and as often as possible.
57 [...] It is because you...you...walk into the book so to speak,
58
59
60

1
2
3 you kind of disappear into the book. You follow the flow. I
4
5 mean, I don't say that I have never been crying for
6
7 something that happened outside of a book, kind of, but
8
9 it's... It carries me away so much. Almost too much. It's
10
11 sounds so silly when you try to explain...
12
13
14
15

16
17 It is obviously emotional for Jeanette to explain how she can
18
19 spend so much time on a media practice that others consider a
20
21 waste of time. The way the interview reveals her struggles to
22
23 balance societal norms with her devotion to fantasy literature
24
25 uncovers the strategies she has developed to balance her
26
27 reading with other (more highly valuable) things she feels she
28
29 needs to do in everyday life (such as to study). The interview
30
31 thus shows how media saturation and reliance often constitute
32
33 a difficult-to-grasp undercurrent in everyday life.
34
35
36
37
38

39
40 The interviews conducted in 2015, in a largely different media
41
42 landscape, hold numerous examples of how people frame their
43
44 uses of social media. An excerpt from a conversation among
45
46 working-class men in their 50s about how to manage and (more
47
48 explicitly) decrease their number of Facebook friends serves
49
50 to illustrate how the visceral dimension of interview data can
51
52 reveal what certain everyday media practices in a highly
53
54 digitalized culture *feels like*.
55
56
57
58

59
60 L: ...no matter how I try [no to be detected], people find

Mediatization from within 31

1
2
3 me. Even though I don't have a [profile] picture or
4
5 anything, but they seem to "well, that must be him", and
6
7 they send [me] a friend request. But then I realise that,
8
9 no... ah, they check in on their yoga course every Tuesday,
10
11 and "I don't care about your yoga course every Tuesday".
12
13 Or, "now we're kind of having a nice Friday night". No, I
14
15 don't care about your nice Friday night. Off they go! I
16
17 just state that, no, I don't need this person, even close
18
19 to me. Get rid of them. (Laughs)
20
21

22
23 I: Okay so you just unfriend them. Is that easy for you,
24
25 or...?
26

27
28 L: Yes, when they show that side of themselves, that they
29
30 just keep posting all these things. Then I'm not interested
31
32 and they simply have to face it.
33

34
35 B: Do they get a message about it...or?
36

37
38 L: I don't know and I don't care. (Laughs)
39
40

41
42 What these men say about unfriending acquaintances and
43
44 colleagues in their networks is content-wise prompt and clear,
45
46 but *the way* they talk and laugh in the conversation can be
47
48 interpreted as an uncertainty as to what is acceptable
49
50 behaviour on social media. Playfully, the respondents try out
51
52 how their personal social media morale fits with the others'.
53

54
55
56
57 *Meta-feelings* capture "how we feel about how we feel" and
58
59 provide insights into discrepancies between "how someone feels
60

1
2
3 and how they feel they *ought* to feel" (Pugh, 2013, p. 51).
4
5 They comprise indeterminate notions of right and wrong,
6
7 repulsion, pride, or resigned acceptance of the way one feels.
8
9

10
11
12 In our interviews from the 1990s, meta-feelings were, for
13
14 example, expressed in accounts of discomfort about media
15
16 dependency, particularly in relation to television. Especially
17
18 upper middle-class respondents tended to both relate their own
19
20 media practices to certain cultural ideals and to *reflect upon*
21
22 *their own way of reasoning*. Helena, a chemical engineer in her
23
24 late twenties, told in the interview that she had given her
25
26 television set away to her parents because she felt it "didn't
27
28 give her anything". Reflecting on her relation to what she
29
30 apprehended as a societal norm, she said:
31
32
33

34
35
36
37 My life was never enriched by watching TV shows that are
38
39 just entertainment packed with commercials. I don't know... I
40
41 never felt I learned anything. Not that everything has to
42
43 be so damn productive but it wasn't even fun, kind of, it
44
45 was just a way of killing time.
46
47
48
49

50
51 In our interviews from 2015, similar ways of talking about
52
53 one's media use were much rarer. Throwing the TV set out or
54
55 giving the media away was never discussed as an option, since,
56
57 at this point in time, digital devices were simply too
58
59 personal and intertwined with everyday life practices (albeit
60

Mediatization from within 3

1
2
3 various media resistance tactics did appear in the discussions
4
5 about how one lived and *should* live). A gender-mixed group of
6
7 art students constantly laughed when talking about how social
8
9 media interfered with how they spent their time.
10
11
12
13

14 L: (laughs) Yes, but, Tumblr's infinite scroll thing, you
15
16 just sit down and... it just loads more and more, it never
17
18 ends! [...]
19

20
21 E: Ah...yes! (All laugh)
22

23 L: You just sit like this [shows a fictive mobile phone in
24
25 her hand]. The absolutely worst is if you do that and after
26
27 a couple of hours you come back to where you have already
28
29 been. Then you get, or I get this *really guilty feeling*,
30
31 kind of. Like "I've been checking Tumblr, this is no good.
32
33 Now you go out and *do something!*" (All laugh)
34
35
36
37
38

39 The constant joking about social media in this group shows
40
41 that concerns with media reliance change shape over time.
42
43 These students humorously tell - not without a certain kind of
44
45 pride - that they are addicted to social media, while
46
47 simultaneously expressing awareness about their own ambivalent
48
49 feelings as well as about other peoples' (judgemental)
50
51 attitudes.
52
53
54
55
56

57 The last of Pugh's categories, which is to some extent present
58
59 in all the others too, bring forward how interviewees present
60

1
2
3 themselves *honourably*. This aspect refers to interviewees'
4 tendency to present themselves in the most favourable way,
5
6 thereby also potentially revealing what is perceived as
7
8 honourable behaviour in their cultural context. Our data
9
10 contain many examples of honourable accounts in relation to
11
12 ideas of legitimate media use. The data from the 1990s are
13
14 particularly rich on statements about the problematic role of
15
16 television in everyday life and how the passivity of TV
17
18 viewing must be balanced by other activities. Interviewees
19
20 typically constructed television as a "time thief", stealing
21
22 time from other, conceivably more important, duties (cf.
23
24 Steiner, 1963; Hirsch, 1992, *reference removed*). One
25
26 respondent, a father, described how "family norms" made it
27
28 socially difficult for him *not to watch* the Friday family
29
30 shows even though he disliked them. To deal with this feeling
31
32 of media dependency, he had developed strategies to make the
33
34 TV night more comfortable - such as bringing an instrument to
35
36 the TV-sofa:
37
38
39
40
41
42
43
44
45

46 It's hard for me to just sit still and consume, I prefer to
47
48 add something more. I turn the sound up and play with it,
49
50 quietly of course, so that the others can still hear.
51
52
53
54

55 By telling how he multitasks in front of the TV, this
56
57 respondent displays his role as a devoted family man while
58
59 also articulating an honourable practice of media resistance
60

1
2
3 (cf. Syvertsen, 2017). In other words, he legitimizes his
4
5 experienced "passive" media use by adding a more "productive"
6
7 practice to it.
8
9

10
11
12 In the interviews conducted in 2015, interviewees also
13
14 presented themselves as honourable media users, however in a
15
16 different manner. Notably, the spatial organisation of
17
18 (increasingly mobile) media was a far more important part of
19
20 the media routines presented in the interviews compared with
21
22 the 1990s. Respondents described how they had introduced
23
24 spatial rules to maintain a respectable life-structure, such
25
26 as "no mobile phones during dinners", "no digital devices in
27
28 the bedroom", or "regular walks without the mobile phone"
29
30
31
32
33 (*reference removed*).

34
35
36
37 The honourable dimension has led many to criticize the
38
39 scientific value of research interviews. However, if we
40
41 recognize this dimension as information in itself about *how it*
42
43 *feels to live with the media at different points in time*, the
44
45 interviews become valuable emic tools for grasping both how
46
47 people cope with media technologies and the social norms
48
49 attached to them *and* the broader cultural understandings
50
51 framing such negotiations. Such tools are vital to qualify
52
53 statements regarding media-related social change beyond
54
55
56
57 (longitudinal) survey data.
58
59
60

1
2
3 If we relate the interview snippets presented above to the
4 larger debate about the mediatization of everyday life, we
5 find that people have for more than twenty years experienced a
6 deep media saturation in their everyday lives. But we also
7 find that the experience of media reliance shifts over time.
8 Whereas respondents in the earlier interviews talked about
9 media reliance largely in terms of activity and passivity in
10 relation to *media content*, respondents in the follow-up
11 interviews also voiced more complex concerns with the
12 *entanglement* of humans and *the media as technological*
13 *artefacts* and the *interference* of technologies in daily life.
14 The way in which this qualitative shift unfolds through inside
15 accounts - implicitly as well as explicitly - says something
16 important about the limitations of etic-oriented approaches;
17 notably the risk of conceiving of mediatization in a too
18 "mechanical" way that blinds us to the manifold layers of
19 human experience.
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43

44 While our empirical examples illuminate the volatile nature of
45 mediatization processes, the argument put forward here is
46 mainly epistemological in nature. The quotes serve to
47 exemplify the benefits of qualitative interview data as part
48 and parcel of a composite emic-etic approach to mediatization.
49 Here, Pugh's (2013) categorization provides an analytical tool
50 for getting behind interview statements to grasp the
51 ambiguities of human experience. As such, the four categories
52
53
54
55
56
57
58
59
60

1
2
3 should be handled with great reflexivity on behalf of the
4 analyst, which also means that they should assist us in
5 discovering how socio-cultural factors play into our own
6 theoretical presumptions (etics) about mediatization.
7
8
9
10
11
12
13

14 **Conclusion: Toward emic-etic mediatization research**

15
16
17
18
19 This paper has been an attempt to insert the distinction
20 between emic and etic research approaches to emphasize the
21 importance of composite accounts of mediatization. As we have
22 shown, current mediatization scholarship is mainly
23 characterized by what Pike (1967) refers to as etic accounts.
24 These accounts forward theoretical, oftentimes sensitizing
25 categories on media-related social change to conclude that our
26 age is characterized by deepened and expanded media reliance.
27 This evokes expectations also on how it feels to live with
28 media. At worst, etic accounts of mediatization mirror the
29 researcher's "scholastic illusion" (Bourdieu, 1990a). A lack
30 of grounded, emic-oriented analysis may lead to mistaking the
31 "things of logic for the logic of things" (Bourdieu, 1990b, p.
32 49). We thus invite scholars of mediatization to further ask,
33 with Bourdieu: "what does the fact of thinking within a
34 scholastic space, an academic space, imply? What does our
35 thinking owe to the fact that it is produced within an
36 academic space?" (Bourdieu, 1990a: 380). What, in other words,
37
38
39
40
41
42
43
44
45
46
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 are we missing by not to a greater extent penetrating the
4
5 lived experiences of mediatization?
6
7
8
9

10 In drawing upon examples from both a representative survey and
11
12 qualitative interviews conducted over twenty years, we have
13
14 problematized the etic-oriented conception of mediatization as
15
16 a dominant process of deepening and expanding media
17
18 dependence. The emic view provided here suggests that
19
20 mediatization, when approached through interviews as *perceived*
21
22 media saturation and reliance, is constructed differently by
23
24 different actors at different stages in history (let alone
25
26 that the time-span of our study is relatively short). The
27
28 value of emic accounts in mediatization theory and research
29
30 will thus grow as we continue to gather first-hand material
31
32 from different sites.
33
34
35
36
37
38

39 Pike (1967), it should be noted, formulated the distinction
40
41 between emics and etics to illustrate their complementary
42
43 nature. Granted, the emic approaches advanced in this paper
44
45 are not without their shortcomings - not even in accounting
46
47 for contemporary transitions. If we consider Deuze's (2011)
48
49 claim that we now live "in the media" rather than "with the
50
51 media", it is not surprising that most people do not consider
52
53 the media to have become more important today compared to five
54
55 years ago, as our survey data suggest. How can we rely on
56
57 lived experiences if those experiences are shrouded by the
58
59
60

1
2
3 deep integration and naturalization of media in our daily
4
5 lives? How can we expect people to account for media change if
6
7 we are at a point in the history of mediatization when media
8
9 have become taken for granted, close to invisible? This is
10
11 where etic perspectives should complement emic ones. Future
12
13 research must be able to both explicate and categorize *actual*
14
15 deepening and expanding media dependencies (etic dimension)
16
17 *and* get at the *experiences* that account for them (emic
18
19 dimension). Such a symbiotic strategy (see Berry, 1999) can
20
21 only be realized by simultaneously considering the objective
22
23 structures of the social world, such as increased presence of,
24
25 and reliance on, media, and subjective meaning-making
26
27 structures (cf. Bourdieu & Wacquant, 1992). We call, thus, for
28
29 mediatization scholars to besides providing more longitudinal
30
31 research also account for the stereographic picture that the
32
33 combined emic-etic perspective affords. Doing so requires
34
35 qualitative *and* quantitative, inside *and* outside perspectives
36
37 on everyday media reliance.
38
